Java version

PS C:\projets\QEES\sources\helloquarkus\helloquarkus-src\target\quarkus-app> java -version

openjdk version "17.0.3" 2022-04-19

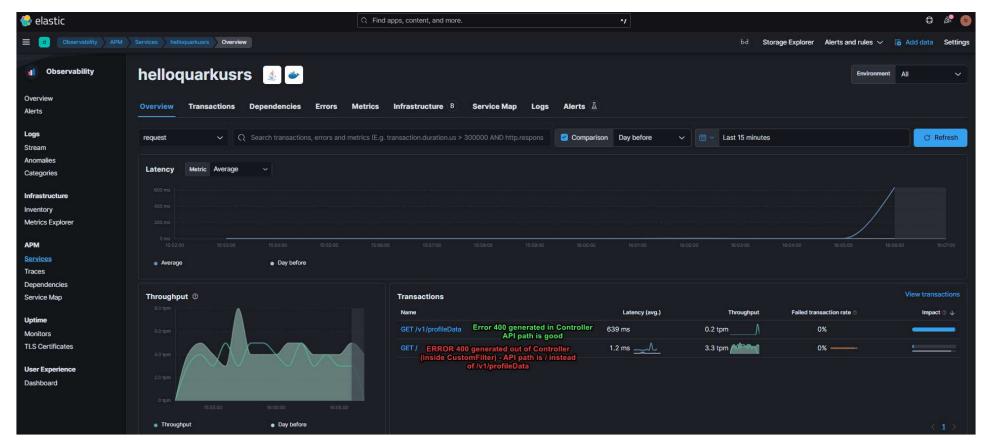

OpenJDK Runtime Environment Temurin-17.0.3+7 (build 17.0.3+7)

OpenJDK 64-Bit Server VM Temurin-17.0.3+7 (build 17.0.3+7, mixed mode, sharing)

Once app is launched:

java -jar quarkus-run.jar

You can launch requests detailes below to reproduce the use cases.

In case of the 400 is generated out the controller, the path is not correctly filled in especially in the transaction.name and labels.http_route

In case of the 400 is generated out the controller, the path is OK.

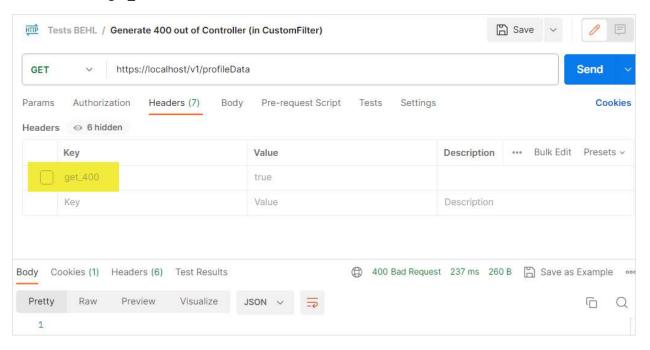

Please find details of the two use cases below.

400 out of Controller

For generating a 400 out of controller (inside custom filter) just request:

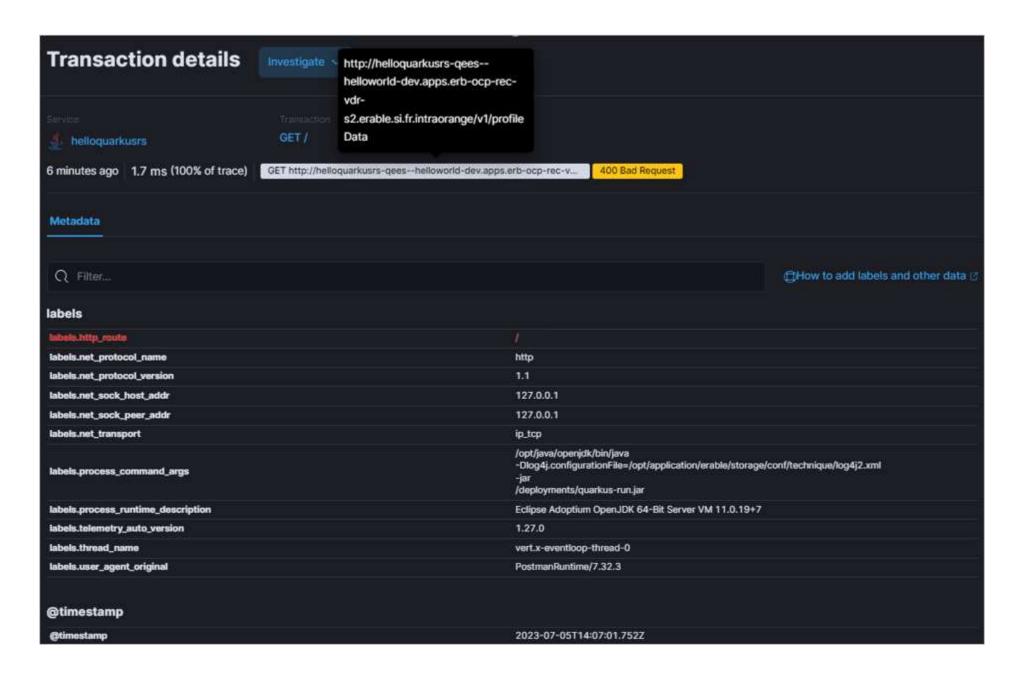

https://localhost/v1/profileData

with no header get_400

400 inside Controller

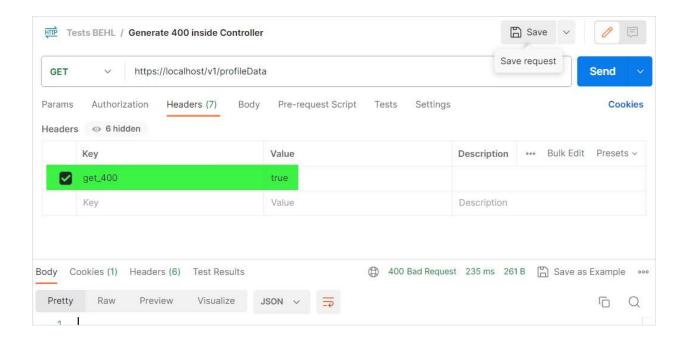

For generating a 400 inside the controller just request:

https://localhost/v1/profileData

with header

name: get_400

value: true

```
package com.apm.controllers;

import ...

prere

Path(@~"/v1/profileData")

public class Controller {

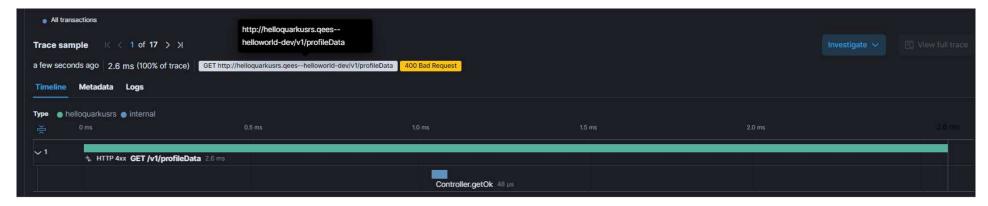

ifrere

GGET @~

@Produces(MediaType.APPLICATION_JSON)

public Response getOk() { return Response.status(400).build(); }

}
```
